The definitive programme of the eArchiving Initiative event is now published! Join the event on 14 May 2025 in hybrid mode, either in person in Brussels or online.

The event will explore the foundations of database preservation and the new electronic archiving trust services in the EUDI Regulation. The morning session of this event will consider the state of the art in database preservation, that involves a series of practices and strategies to ensure that data remains usable and intact over time despite technological changes and potential data degradation.

The afternoon session will focus on the new trust service in the EUDI based on the eIDAS: the electronic archiving trust service.

The event will conclude with a reflection on how the eArchiving Initiative has incorporated the outcomes of the 2024 Brussels event and the plans for the coming year.
