SMB-digital, Online collections database

Aims of the case study - 1/2

- Can digital collections serve as a tool for research?
- What are their advantages or not in comparison to other media?
- Can they support education or mediation work?
- Focus on user needs, expectations and requested skills

Aims of the case study - 2/2

User-centred evaluation of the online collection

- Why people would visit the service?
- How are they using the service?
- What do they gain from the service?
- How easy is the service to use?
- Do they find the information they look for?
- Are their expectations met?
- What would they like to see improved?

Case study methodology

- With a group of museum guides (age between 36-60, experience in the field between 8 and 20 years)
- Focus group discussion ca.1,5 hour to understand their information needs
- 20 min. evaluation of SMB-digital (single)
- Semi-structured single interviews (30-40 min, recorded and transcribed)

Findings of the focus group, 1/2

- Use of digital media very much depends on personal attitude and experience
- Younger guides are more open to explore the digital resources
- For research work all guides rely mainly on "traditional" print resources
- They were not well informed about existing digital services and resources

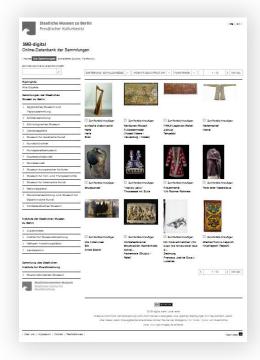

Findings of the focus group, 2/2

- Younger staff members of the museum education department use digital platforms for storing and exchanging information with the guides
- Use of media to support guided tours with museum visitors is related to each guide's digital literacy and personal means
- Museum network infrastructure does not facilitate use of digital media for guided tours – WLAN not available in all the galleries

Findings of the online collection evaluation by means of interviews with the museum guides

Two attitudes for access to information on the collections:

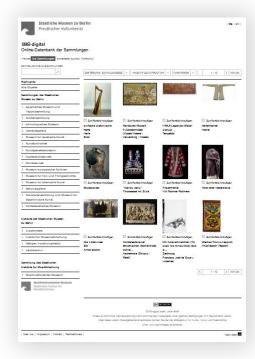

- Search for specific information
- Browse and explore the collections

Need for a better search functionality

Need for more accurate search results

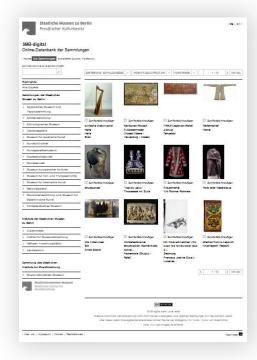

User expectations

- Richer documentation of the objects
 - More images for each object
 - Details of high resolution images
 - Zoom functionality
 - More resources
 - Context information
- Information on the location of the objects
- Export and re-use of content
- Clear mentioning of copyrights

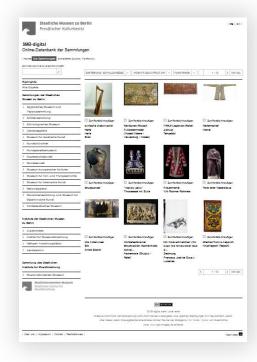

Positive Comments

- Good overview of collections
- Random discovery of new collections and objects
- Impulses for new themes and guided tours
- Huge resource to explore
- Ready to invest more time and learn the system

Conclusions

- SMB-digital is easy to browse and allows to explore the collections
- SMB-digital cannot yet serve as a tool for research; information on the objects has to be enriched
- It does not replace traditional analog resources but can complement them, if the search functionality is improved
- Use as education tool needs to be tested
