Archaeology and Architecture in Europeana, workshop by CARARE & Europeana

This two-day workshop is jointly hosted by CARARE and Europeana at the University of Leiden, Faculty of Archaeology. The theme of the workshop is **Archaeology and Architecture in Europeana**.

The physical remains of Europe's rich heritage are all around us. The historic houses we live and work in, the places we go to worship, places we visit to explore tombs, earthworks, architectural ruins or monuments to industries past, the museums we visit, the shape of our landscape and the ground beneath our feet.

Digital technologies are widely used to capture the heritage for conservation and research, for analysis, to support learning and tourism, and for enjoyment. This workshop will explore how digital content for the archaeological and architectural heritage can be made available to users of Europeana, experiences and best practices, and potential re-uses of the content for education, tourism, and researchers.

The workshop is free to attend, registration is through Eventbrite HERE.

Preliminary programme

10:30: Registration

Welcome

Session 1: Archaeology and Architecture in Europeana

This session will begin with an overview of archaeology and architecture in Europeana and an introduction to CARARE, followed by case studies of experiences in providing content to Europeana

Session 2: Heritage data

This session will focus on the development of approaches to increase the interoperability of heritage data such as the uses of linked data, historic place names and GI, and its accessibility for research and community geo-portals.

Session 3: Technologies: data management and data quality

This session will focus on technologies for metadata aggregation, tools and services, and applying the FAIR principles (findable, accessible, interoperable and reusable).

Session 4: Heritage and users

This session will focus on the uses of archaeology and architecture datasets for education, cultural tourism etc.

The programme will include discussion and practical sessions on making archaeological and architectural datasets available to Europeana's users.
