Bibracte, a 2000-year-old town under a forest

img. courtesy: Europeana

As part of the EUreka3D project, a blogpost authored by Agathe Le Riche-Maugis and collegues from Bibracte was recently published on Europeana.

The blogpost shocases the history of Bibracte, an archaeological site in the French region discovered in the 19th century and brought back to life, along with a museum that display nearly 2000 objects. With EUreka3D project the most representative objects discovered on the site will be digitised in so that they can be shared on Europeana.

Read the blogpost here.

EUreka3D project is co-financed by the Digital Europe Programme of the European Union.
