As part of the [EUreka3D](#) project, a blogpost authored by Agathe Le Riche-Maugis and colleagues from Bibracte was recently published on Europeana.

The blogpost showcases the history of Bibracte, an archaeological site in the French region discovered in the 19th century and brought back to life, along with a museum that displays nearly 2000 objects. With the EUreka3D project, the most representative objects discovered on the site will be digitised so that they can be shared on Europeana.

Read the blogpost [here](#).

EUreka3D project is co-financed by the Digital Europe Programme of the European Union.
