"Disaster Management and Climate Change in Archives"

The new challenges that archives face today concern their relationship with space and the environment, a balance that is increasingly fragile and exposed to risk: floods, fires, and climate change are reshaping the risk profile of documentary heritage.
The workshop organized by the Historical Archives of the European Union, **Disaster Management and Climate Change in Archives**, brings together experts from the sectors of cultural heritage preservation, risk management, and sustainability to examine the contemporary risk profile of heritage organisations and strategies to address it. The workshop will take place December 4-5, 2025 both online and on site.
