DPF Manager 3.5 available to download

A new version of the DPF Manager has been released!

There are several improvements in this update. The most significant one is the **redesign of the reports section**, where now it is easier (and much faster) to browse the analyzed reports, transforming between formats, and also converting a quick check to a full check. The global report has also been improved with a more visual and interactive panel.

Other interesting new functionalities and enhancements are the following:

The **METS** report is generated in all the cases (previously it was only genereated if there where no errors at all.
Download reports from the GUI functionality
- Added pagination functionality to improve the efficiency (specially when thousands of files are checked)
- Included execution time duration to global reports
- Fixed bugs related to the zipped tiff files validation.
- Delete report from global reports page
- Sorting reports by the passed column now shows first the ones that have warnings
- Bugfix when trying to send feedback with non-xml reports.
- Compatibility with old reports (previous to version 3.3)

See the full list of new functionalities in the github tag page and the list of solved issues.
