EGI2023 conference in Poland

At this year's annual EGI conference, that will take place in Pozna? (Poland), international scientific communities, computing and service providers, European projects, security experts, community managers, and policy makers gather to take research and innovation in data-intensive processing and analytics forward. EGI is the federation of computing and storage resource providers united by a mission of delivering advanced computing and data analytics services for research and innovation.

During the core conference days (from 20 to 22nd June) the participants will have the possibilty to meet the scientific communities that are at the forefront of innovation to learn more about their cases and start new collaborations, to meet the largest community of research cloud providers in Europe and their IT strategies, to stay up to date with the latest technical development in cybersecurity, scientific applications, data processing and analytics, and more. Moreover, a call for contributions is now open.
