

EOSC European Open Science Cloud symposium

ABOUT THE EOSC SYMPOSIUM

Last year, the Council of the European Union defined the specific policy priorities of 2022-2024 for the establishment of the New European Research Area (ERA) as a 'researchers-centred, value-based, excellence as well as impact-driven area, in which researchers, knowledge and technology are supported and can circulate freely.'

The European Open Science Cloud (EOSC) was highlighted as the key to facilitate the creation of 'a truly functioning internal market for knowledge' by enabling the open sharing of knowledge and the re-use of research outputs. By being the data space for science, research and innovation, EOSC is therefore the essential facilitator for the realisation of the European Data Strategy.

The EOSC Symposium is the main EOSC annual event and takes place this year in **Prague, Czech Republic, from 14th-17th November 2022** as part of the calendar of events of the Czech presidency of the Council of the EU. This coincides with [the Second EOSC Tripartite Event](#) on the 15th of November 2022.

Over 500 stakeholders from ministries, policy makers, research organisations, service providers, research infrastructures and research communities across Europe and beyond are expected to attend the Symposium to reflect on the EOSC key achievements and strategic challenges, and to identify priorities and concrete actions at the European, national, and institutional level to speed up EOSC implementation.

Full programme available HERE: <https://events.eoscfuture.eu/symposium2022/programme>

The plenary sessions will be live streamed.

Registration until 2 November: <https://events.eoscfuture.eu/symposium2022/begin>
