

EUREKA3D initiative presented at Digital Heritage 2025

From 8th to 13th September 2025 Antonella Fresa, president of Photoconsortium and EUREKA3D-XR Project Coordinator, took part to [Digital Heritage 2025](#), the premier global forum where culture meets cutting-edge technology, hosted in Siena.

With colleagues from Europeana Foundation, XRculture, 3DBigDataSpace and 3D-4CH, in the workshop **?3D Data in the Data Space for Cultural Heritage?**, Fresa presented the EUREKA3D initiative and the work ongoing in the EUREKA3D-XR project to an audience of selected and very interested attendees.

The workshop was dedicated to provide an insight in the Data Space for Cultural Heritage as the new flagship initiative from EU available to cultural heritage institutions and other cultural stakeholders, surrounded by a plethora of supporting projects focused in particular to deal with 3D assets and reuse in XR applications. The workshop enabled speakers and the audience to discuss the impact of those endeavours with regards to overarching challenges faced by cultural heritage institutions about data storage and management, standards, capacities and applications; and also provided hands-on experiences with innovative tools openly available to cultural professionals.
