Progress of EUreka3D-XR pilots presented at Europeana Aggregators Forum 2025

On the Autumn edition of the Europeana Aggregators Forum (15-16 October 2025), Valentina Bachi from Photoconsortium was invited to delivered a presentation to showcase the outcomes and progress of EUreka3D-XR.

The presentation started with the two main outcomes from EUreka3D project: the EUreka3D Data Hub, a European alternative to private and commercial cloud services that guarantees full control on rights and content stored in EU, which supports high quality in 3D and reuse of collections, and facilitates sustainability of digitisation projects in Europe; and the 3D digitisation guidelines, an accessible step-by-step support document to develop successful 3D digitisation projects. These resources are available for any CHIs who wants to access and reuse them.

Then the focus of the presentation shifted to offer a glimpse of what the EUreka3D-XR pilots are developing in Girona, Bibracte and Cyprus with the use of the 5 open access tools for XR creation, currently being prototyped in the project.
