

Europeana Space first Hackathon announced

Europeana TV
Open up culture, enrich television.

The **Europeana TV Pilot** (interactive television) of Europeana Space has made significant progress on the realization of two scenarios to experiment with, being:

- Local scenario, for the smaller scale media outreach;
- Broadcast scenario for the larger scale media outreach.

Both scenarios are generating prototypes, and the pilot is getting ready for a big [Hackathon event in Amsterdam on 8-9-10 May](#).

Local scenario

The work on the local scenario is in full progress. Two workshops took place between the pilot members in the past months, to work out the details of the scenario, the needed features, the wireframes for the interface, and a design document detailing all user requirements. Particularly useful and outcome-generating was the [workshop held in November 2014, where the ReWind app was presented](#).

Broadcast scenario

Work on the broadcast scenario is also progressing according to plans. In this scenario, workshops were held too: at the first

workshop in August the 'Chance discovery of rich cultural content' use case was discussed with the partners. A version of the Smart TV app 'The Berlin Wall' was created and has been publically available since the 3rd October 2014 on rbb fernsehen, RBB TV channel. The idea was to create and test a model app, to provide certain requirements and to serve as the basis for further work on the broadcast scenario, and use this input for workshops.

[Another workshop was planned in February 2015 in Berlin.](#) The plan is to re-create an app similar to 'The Berlin Wall' app using tools provided by the partners to curate content from European and create a broadcast standard application for Smart TV (HbbTV).
