Innovative Libraries In a Digital Environment

For the 19th time, the beautiful surroundings of Low Tatras will create a scenery for the **ILIDE 2016 Conference** where as usually the digital preservation, digital collections access and digital processing experts from around the world will gather.

The conference is the continuation of well-known and prestigious Digital Library Conference. The organisers felt that the name should reflect the broader area of topics the conference has recently presented and ilide: Innovative Library in Digital Era fully represents the conference's broader scope. However, the ilide2016conference is not losing its attractive atmosphere and remains a unique opportunity to connect with library professionals, who work in a variety of government, academic and private sectors.

The presentations will be given by leading representatives of the most important institutions dedicated to librarianship, archiving, information technology, cultural and collecting activities.

Antonella Fresa, Technical Coordinator of **PREFORMA**, will present the project, focusing in particular on the open source approach and on the forthcoming testing phase, showing how the conformance checkers can be used and integrated in other systems.

For further information please visit the Conference website.
