

OSS 2016 International Conference on Open Source Systems

The **International Conference on Open Source Systems (OSS)** is a long-standing international forum for researchers, practitioners from business and industry, enthusiasts, and students to present and discuss the latest trends, experiences, and concerns in the field of Free/Libre Open Source Software (FLOSS).

The 12th OSS Conference will take place in will take place in the city of Gothenburg, in 30 May - 02 June 2016.

The goal of 12th International Conference on Open Source Systems, OSS 2016 is to provide an international forum where a diverse community of professionals from academia, industry and public sector, and diverse FLOSS initiatives can come together to share research findings and practical experiences. The conference is also a forum to provide information and education to practitioners, identify directions for further research, and to be an ongoing platform for technology transfer, no matter which form of FLOSS is being pursued.

FLOSS has had a disruptive effect on the software industry and the ways that organizations and individuals create, distribute, acquire and use software and software-based services. The FLOSS movement has created new kinds of opportunities such as the emergence of new business models, knowledge exchange mechanisms, and collective development approaches. On the other hand, the movement has introduced new kinds of challenges, especially as different problem domains embrace openness as a pervasive problem solving strategy. FLOSS can be complex yet widespread and often cross-cultural. Consequently, they require an interdisciplinary understanding of their technical, economic, legal and socio-cultural dynamics.

Many organizations that have been known for developing proprietary software are now actively involved with FLOSS. FLOSS adoption continues to grow among businesses, governments, and other organizations. FLOSS remains important for educators and researchers, as well as an important aspect of e-government and information society initiatives, providing access to high-quality software and the code used to create it.

For more information and to submit proposals for research papers, industry papers, formal tool demonstrations and posters. please visit the [Conference website](#).
