Organized by eArchiving Initiative funded under DIGITAL, this year's event will focus on two main topics, namely database preservation and the EUDI electronic archiving trust service.

The morning session of this event will consider the state of the art in database preservation. Database preservation involves a series of practices and strategies to ensure that data remains usable and intact over time despite technological changes and potential data degradation. There will be presentations to explore this topic from members of the DILCIS Board who maintain SIARD specification (Software Independent Archiving of Relational Databases) and from members of the Database Archiving Working Group. These will be complemented by presentations of use cases.

The afternoon session will focus on the new trust service in the EUDI based on the eIDAS: the electronic archiving trust service. The EUDI Regulation aims to ensure the proper functioning of the internal market and the provision of trust services used across the European Union. Different stakeholders will present their views on the impact of this new trust service. The event will conclude with a reflection on how the eArchiving Initiative has incorporated the outcomes of the 2024 Brussels event and the plans for the coming year.

The event is open to anyone and is free of charge. Register and get more info at [this link](#).
