"Endangered Heritage Sites: Enhanced Representations for Informed Solutions" book published

Following the editorial project that called for book chapters back in March 2024, the book **Endangered Heritage Sites: Enhanced Representations for Informed Solutions** has been published as part of Springer Series on Cultural Computing (SSCC).

The book explores three key dimensions of digital heritage research:

- Smart heritage information systems
- Heritage forensics
- Interactive participation via virtual heritage applications

Highlights:

- Offers a detailed analysis of advanced surveying methods and tools for decoding and analysing cultural heritage data
- Shows the potential of enriched representations and integrated analyses via case studies of endangered heritage sites
- Examines challenges in diagnostic knowledge and interventions for effective preservation strategies

Editors: Stefania Stellacci & Serdar Aydin
