The ROCK Project?s Book is out!

The ROCK project sees historic city centres as laboratories to demonstrate how Cultural Heritage can be an engine of regeneration, sustainable development and economic growth. ROCK approach foresees the systemic and flexible application of a series of role-model practices in the testing sites of three Replicator cities, to turn historic city centres afflicted by physical decay, social conflicts and poor life quality into Creative and Sustainable Districts.
This book, edited by UNIBO, highlights the major result of the ROCK project: it includes essays, practices descriptions, reflections from the project as well as a series of lessons learned from the ROCK cities and tools.
It is part of the CPCL Series, published in Open Access by TU Delft Open Faculty of Architecture and the Built Environment, Delft University of Technology.
