veraPDF 0.22 released

The latest version of veraPDF is now available to download. Version 0.22 has the following improvements:
Application enhancements:

changed default feature generation to document level features;

added a new GUI dialog for managing feature generation options;

added a user-friendly Java OutOfMemoryError with suggestions for reconfiguration;

CLI can now overwrite report files;

added help message when CLI processes STDIN stream; and

synchronized the Web demo validation report with the CLI and GUI report styles.

Conformance checker fixes:

removed the rules for validating file provenance information;

fixed an issue with structure type mapping in Level A validation; and

implemented resource caching for memory optimization.

Test corpus:

converted all 'fail' test cases on file provenance information to 'pass' tests.

Call for testing
veraPDF is building an open source, industry-supported PDF/A validator. Please support our efforts by downloading and testing the software. If you encounter problems, or wish to suggest improvements, please add them to the project's GitHub issue tracker (https://github.com/veraPDF/veraPDF-library/issues). Your feedback is very important, it helps to improve the software.
Keep up to date with the latest developments of veraPDF by subscribing to the veraPDF consortium's newsletter (http://verapdf.org/subscribe/).

Upcoming events
