

veraPDF 0.24 released

The latest version of veraPDF is now available. Version 0.24 includes a prototype of batch validation in both the CLI and GUI. Other new enhancements include:

Conformance checker

- added extraction of the AFRelationship key for embedded files as a part of veraPDF feature extraction.

Application enhancements

- implemented prototype of batch validation from CLI and GUI;
- implemented robust handling of run-time exceptions during batch processing; and
- added error info on the run-time exceptions to the validation report.

Code Quality

- moved feature extraction and metadata fixing code to library; and
- tidied various compiler warnings.

Call for testing

veraPDF is building an open source, industry-supported PDF/A validator. Please support our efforts by downloading and testing the

software. If you encounter problems, or wish to suggest improvements, please add them to the project's GitHub issue tracker (<https://github.com/veraPDF/veraPDF-library/issues>), or contact us through our mailing list. Your feedback is very important, it helps to improve the software.

Experience workshop: Meet us at the PREFORMA Experience workshop, 23 November 2016:

<http://experienceworkshop.preforma-project.eu/>

Led by the [Open Preservation Foundation](#) and the [PDF Association](#), the veraPDF consortium is developing the industry-supported open source, file-format validator for all parts and conformance levels of ISO 19005 (PDF/A). The software is designed to meet the needs of memory institutions responsible for preserving digital content for the long term.

The veraPDF consortium is funded by the [PREFORMA](#) project. PREFORMA (PREservation FORMAts for culture information/e-archives) is a Pre-Commercial Procurement (PCP) project co-funded by the European Commission under its FP7-ICT Programme.
