

veraPDF 0.8 now available

We are pleased to announce the latest release of veraPDF. Version 0.8 features a re-designed command line interface (CLI) for validation and feature extraction.

Highlights of this release are:

- Refactored plug-in architecture;
- Re-designed CLI for PDF/A validation and feature reporting;
- Supporting install scripts;
- Updated validation profile syntax;
- Simplified machine-readable report format;
- Synchronization with PDFBox 2.0 RC1 library.

The most important bugs fixed in this release are:

- Comparison of Info dictionary and XMP metadata (PDF/A-1);
- Support for missing resources and resource inheritance mechanism (PDF/A-1); and
- Parsing TrueType fonts with zero-length tables.

Release notes are published at: <https://github.com/veraPDF/veraPDF-library/blob/release-0.8/RELEASENOTES.md>

veraPDF will deliver the definitive PDF/A validator. Please download and test the software. If you encounter problems, or wish to make suggestions, please add them to the project's [GitHub issue tracker](#). Your feedback is important, it will contribute to improving the software.

About]

Led by the [Open Preservation Foundation](#) and the [PDF Association](#), the veraPDF consortium is developing the definitive open source, file-format validator for all parts and conformance levels of ISO 19005 (PDF/A). The software is designed to meet the needs of memory institutions responsible for preserving digital content for the long term.

The veraPDF consortium is funded by the [PREFORMA](#) project. PREFORMA (PREservation FORMAts for culture information/e-archives) is a Pre-Commercial Procurement (PCP) project co-funded by the European Commission under its FP7-ICT Programme.
