

Visual Computing for Cultural Heritage

The tenth appointment of the "Collana di seminari 2012 per la valorizzazione dei risultati della ricerca al Crs4" is scheduled for October 4th , in Cagliari at the Aula Magna of the Faculty of Architecture, on the theme of "Visual computing."

CRS4 is an interdisciplinary research center promoting the study, development and application of innovative solutions to problems stemming from natural, social and industrial environments. Information Society and Technology and High Performance Computing are the supporting foundations. The main objective is innovation. The mission is to help Sardinia to build and support a layer of modern high tech industries considered essential to its economic and cultural development.

During the seminar the speakers will illustrate the theories, techniques and technologies that enable the effective management, utilization, exploration and 2D and 3D visualization of large amounts of digital data in real time on various types of displays. Among the interventions it will be a special focus on applications for cultural heritage.

Video Presentation of the Visual Computing (italian language)
