

HARMOSEARCH

the future of information services

Electronic data exchange has been an important task within the field of travel and tourism already for decades, since it is a highly information-dependent industry. What has been a very technical job for a few large players in the past has become a challenging task for thousands of small companies today, due to the lack of a unique international data standard.

HarmoSearch will continue ongoing research in overcoming this interoperability problem by introducing tools to easily connect to an open data network and to find relevant information sources. An intelligent mapping tool, automatic translation of data queries and semantic registries about data providers will make it very easy – especially for SMEs – to exchange data and participate in the global online business in a cost-efficient way.

Join our network to shape the future of information services!

HarmoSearch is a project within the 7th Framework Programme of the European Commission

DEVELOPMENT AND DISTRIBUTION BY THE HARMOSEARCH PARTNERS

SME

(small and medium-sized enterprises)
